The comparative information presented below is based on all companies reporting MCAS Homeowner data to the State of Maryland for data year 2009. You can compare your company's results to these statewide average ratios, which were calculated using aggregate data received from all companies for Maryland. For each ratio, there is also a chart indicating the number of reporting companies whose ratios fall into each range of values.

If your company's calculated ratio for any area is 9999.9% it is an indication that activity was reported for that ratio category but a valid ratio could not be calculated. For example, if your company reported non-renewal activity but no policies in force, the ratio of non-renewals to policies in force would show as 9999.9%.

# 1. The number of claims closed without payment compared to the total number of claims closed: Maryland Statewide Average 27.3%

_							1,2001 90	20000
